Graphics drivers for $\LaTeX 2_{\varepsilon}^*$

Sebastian Rahtz and David Carlisle 1999/02/16

1 Driver files

This file implements some of the currently supported drivers. If the driver you use is not in this list then a '.def' file may be distributed with This graphics bundle, or may be distributed with your driver.

If not, send us some details of the driver's \special syntax, and we will try to produce a suitable file.

Note that some of these files are for drivers to which we have no access, so they are untested. Please send any corrections to the latexbugs address.

2 Colour

Most of the drivers that support colour use one of three methods.

- color1: 'dvips' style colour specials.
- color2: 'textures' style colour specials.
- color3: Colour implemented via literal PostScript specials.
- color4: Colour implemented by specials that only support RGB ie Red Green Blue specified as integers in the range 0–255. Other models converted to this within T_EX .

Some drivers do not use any of these modules and have their own code. Note that drivers using the 'color3' code can not fully support the LATEX colour commands.

```
1 \( *\color1 | \color2 | \color3 | \color4 \\)
2 \\def\c@lor@arg#1{%
3 \dimen@#1\p@
4 \ifdim\dimen@<\z@\dimen@\maxdimen\fi
5 \ifdim\dimen@>\p@
6 \PackageError{color}{Argument '#1' not in range [0,1]}\@ehd
7 \\fi}
```

Need to make sure of a trailing .0 for textures. Apparently it is OK to always add a . as 1.3. is accepted by textures. textures gray special is reversed, so just use rgb instead.

```

```

22.1 Rotation

23 dviwin

A IATEX $2_{\mathcal{E}}$ graphics driver file for Hippocrates Sendoukas' dviwin 709 $\langle * \text{dviwin} \rangle$

23.1 Graphic file inclusion

Dviwin sorts out the graphics type itself based on extension. They all use the same \special, so as far as graphics.sty is concerned they are all the same 'type'. Use 'bmp' for the type as that is as good a name as any. Make this the default.

```
710 \Qnamedef{Gin@rule@*}#1{{bmp}{}{#1}}
711 \def\Ginclude@bmp#1{%
712 \raise\Gin@req@height\hbox{%
713 \special{anisoscale #1,
714 \the\Gin@req@width\space \the\Gin@req@height}}

The only exception is EPS files, as they may be read for BoundingBox
715 \Qnamedef{Gin@rule@.ps}#1{{eps}{.ps}{#1}}
716 \Qnamedef{Gin@rule@.eps}#1{{eps}{.eps}{#1}}
717 \let\Ginclude@eps\Ginclude@bmp
```

Add a few default extensions so \includegraphics{a} will pick up a.eps or a.wmf. This list can be reset with \DeclareGraphicsExtensions. Other extensions not in the list may be used explicitly, eg \includegraphics{a.gif} should work as long as dviwin has access to a gif filter. If .gif is added using \DeclareGraphicsExtensions then \includegraphics{a} would also find a.gif.

```
718 \def\Gin@extensions{.eps,.ps,.wmf,.tif}
719 \dviwin\
```

24 ln

A IATEX 2_{ε} graphics driver file for B Hamilton Kelly's ln03 driver. Untested, but based on the graphics macros distributed with the driver. 720 (*In)

24.1 Graphic file inclusion

```
721 \def\Ginclude@sixel#1{\special{ln03:sixel #1}} 722 \langle | ln \rangle
```

25 trutex

A LATEX 2_{ε} graphics driver file for Kinch 'truetex' driver. 723 $\langle *truetex \rangle$

25.1 Colour

Uses the 'color4' colour code.

25.2 Graphic file inclusion

```

814 \def\TCI@cropright{1}
815 \def\TCI@cropbottom{0}
816 \let\TCI@temp\@empty

File inclusion macro is always the same. Use a different name though as LaTeX thinks it can read eps files for BoundingBox.

817 \let\Ginclude@bmp\Ginclude@eps

26.3 Literal PostScript

This is not supported, so uses 'nops' code.

26.4 Default Rules

SW always gives the full name with extension. So leave this list empty.

```
818 \def\Gin@extensions{}
```

.ps .PS .eps .EPS are (E)PS rest are 'bmp' which is a catch all type for anything that the inport filter can handle.

```
819 \Cnamedef{GinCruleC.ps}#1{{eps}{.ps}{#1}} 820 \Cnamedef{GinCruleC.eps}#1{{eps}{.eps}{#1}} 821 \Cnamedef{GinCruleC.PS}#1{{eps}{.PS}{#1}} 822 \Cnamedef{GinCruleC.EPS}#1{{eps}{.EPS}{#1}} 823 \Cnamedef{GinCruleC*}#1{{bmp}{\GinCext}{#1}} 824 \langle \text{tcidvi} \rangle
```

27 Literal Postscript

Most drivers writing to PostScript allow some form of 'literal' PostScript \special that inserts code into the final PostScript output. However Non-PS drivers can not support this (and some PS one's can't either). The code here makes all these

commands no ops. Individual driver sections may define the commands to do something useful.

```
825 (*nops)
```

Raw PostScript code, no save/restore. Coordinate system unspecified.

 $826 \def\Gin\PSOraw#1{}$

PostScript code, to be surrounded by save/restore by the driver. Coordinate system standard PostScript, but with origin at current (TeX) position.

```
827 \def\Gin@PS@restored#1{}
```

PostScript code to be inserted in the Header section of the final PostScript. Must be issued on the first page of a document.

```
828 \def\Gin@PS@literal@header#1{}
```

Name of external file, the contents of which are to be inserted in the Header section of the final PostScript. Must be issued on the first page of a document.

```
829 \def\Gin@PS@file@header#1{}
```

830 (/nops)
